

Description:

Green Protection® seamless knitted glove coated on the palm with a natural rubber Micro foam Finish.

This innovative and eco-friendly glove is produced using an entirely new manufacturing process powered from the energy of the sun®.

The special liner construction and the combination of innovative material are delivering a softer touch and higher climate and sweat control which will allow a longer wear with improved comfort and protection.

Elasticised composite knitted wrist with colour coded and over-locked cuff.

Designed for a multiple range of industries and mechanical risks exposure. It is the ideal safety glove for general maintenance and assembling work both indoor or outdoor.

Sizes Available:

SIZE AS PER EN 420	CUFF COLOUR
8	Yellow
9	Brown
10	Black

Cleaning & Maintenance:

Gloves should not be left in contaminated condition if re-use is intended especially if potential hazards exist. Before removal from the hands excess contaminant should first be removed however, should this not be possible, it is advisable to ease left and right hand gloves off using the gloved hand & remove the gloves without the contaminant contacting the bare hands. The gloves may then be de-contaminated as indicated below:

100% Green Protection® gloves have proven that dry cleaning as well as laundering are suitable cleaning methods.

We recommend that no bleaching or oxidising ingredients or any fabric softeners be used.

Recommended washing temperature is between 40°C and 60°C (104-140°F) with mild detergents.

The drying process may cause felting on the fabric surface. Drying temperature should not exceed 70°C (158°F).

There is no remarkable impact on cut resistance during the normal life cycle of a glove however, depending on glove construction, staining and cleaning method, the differences in shrinkage, weight loss, yarn strength and colour may occur. In order to maximise the glove life cycle we recommend the mildest possible cleaning conditions in terms of temperature, chemicals and cycle duration.

Due to a wide variety of possible constructions and combinations with other materials we recommend to always consult your professional cleaning service to determine the best suitable cleaning method.

Storage:

Store the gloves the original packaging in a cool dry place and out of direct sunlight and UV light.

Packaging:

The gloves are packed in individual bags. The gloves are placed in cardboard cartons suitable for transportation and storage.

Obsolescence:

Stored correctly, the gloves physical properties will not change for up to three years.

Note:

None of the materials or processes used in the manufacture of these products is known to be harmful to the wearer. The manufacturer has examined under the system for ensuring quality of production by means of monitoring and inspection. The gloves are designed to accommodate the basic safety requirements and standards for Personal Protective Equipment. The information contained herein is intended to assist the wearer in the selection of personal protective equipment. Actual conditions of use cannot be directly simulated in a test environment so it is therefore the responsibility of the end user and not the manufacturer or supplier to determine the gloves suitability for the intended use.

All gloves should be thoroughly inspected before use to ensure no damage is present.

Green Protection® glove series have been developed in Europe specifically for Hand, Arm and Body Protection with Eco Friendliness in Mind.

Made from the Energy of the Sun®, this innovative new range will not only protect the environment but also your hand against mechanical risks and reduce the lost time from mechanical related injuries. This high abrasion resistant material is both comfortable and flexible.

Green Protection® material has a very favourable Eco Friendly price to performance ratio and the impact on the environment is favourably reduced where Green Protection® products are being used.
